

ARBOflex Flexible wall feeders

Versatility, Innovation, Affordability

GRAVIMETRIC FLEXIBLE WALL FEEDERS UNILINE AND MULTILINE CONTROLLERS SCALES

As with the volumetric models, the LIW machines provide the convenience of horizontally and vertically removable polyurethane hopper, quick connect side panels and the durable and versatile design you have come to expect from ARBO products.

The scales which support the feeders are fabricated from top quality materials and provide durable and affordable precision.

Available in carbon steel or stainless steel, the scale features a Nema 12 junction box which contains either one or two VFD's depending on the feeder being a single or dual drive model.

ARBO offers two types of controllers with the ARBOflex line of feeders. A central type (Multiline models) for control and monitoring of two to eight feeders and a local type (Uniline model). The Uniline model is also available as a blind controller in a distributed control system, and features plug and play capabilities for unsurpassed versatility.
